UJIAN TENGAH SEMESTER PEMROGRAMAN KOMPUTER2

Nama : Wiwin Nur KHolifah

Nim : 18090030

Kelas : 4B

D1V TEKNIK INFORMATIKA POLITEKNIK HARAPAN BERSAMA KOTA TEGAL

MANUAL BOOK PERUMAHAN

1. MEMBUAT DATABASE

- Buka xampp, lalu aktifkan Apache dan Mysql dan pilih admin untuk masuk ke phpmyadmin
- Lalu kita buat basis data seperti di bawah ini :
 Dengan nama = perumahan

 untuk tb_rumah kalian bikin seperti di bawah ini : Pada 'id' jadikan primary key ceklis AUTO INCREMENT

Bagian tb_admin kalian bikin seperti di bawah ini : Pada 'admin_id' jadikan primary key ceklis AUTO_INCREMENT

2. MENYIAPKAN PROJECT

- Buka aplikasi Netbeans anda, kemudian buat project baru dengan nama perumahanWiwin

- Setelah anda membuat project baru, buatlah package baru dengan nama Uts_wiwin18090030

- Setelah anda membuat package, buatlah java class dengan nama koneksi
- Setelah anda membuat java class, buatlah jframe form untuk login dan jframe form untuk CRUD

3. MEMBUAT JAVA CLASS

- Buat class "koneksi" dan buat Jframe "Login", "Data_perumahan"
- Class koneksi fungsinya untuk menyambungkan ke database, Isikan di class koneksi seperti dibawah ini :

package Uts_wiwin18090030; import java.sql.Connection;

```
import java.sql.DriverManager;
import java.sql.SQLException;
* @author wiwin
*/
public class koneksi {
  public static Connection sambungDB(){
    String JDBC_DRIVER_CLASS = "com.mysql.cj.jdbc.Driver";
    String username = "root";
    String host = "localhost";
    String port = "3306";
    String password = "";
    String dbName = "perumahan";
    String url = "jdbc:mysql://"+host+":"+port+"/"+dbName;
    Connection kon = null;
    try {
       Class.forName(JDBC_DRIVER_CLASS).newInstance();
       kon=
       DriverManager.getConnection(url,username,password);
       System.out.println("Koneksi: Sukses!");
       return kon;
     } catch (ClassNotFoundException | IllegalAccessException |
       InstantiationException | SQLException e) {
       System.err.println("Error: "+ e.getMessage());
       System.exit(0);
       }
       return null;
  }
```

4. MEMBUAT JFRAME

- Buat jframe login seperti di bawah ini :

Lalu isikan Codingan seperti di bawah ini

- Pertama kita import seperti codingan dibawah

package Uts_wiwin18090030;

```
import java.awt.Frame;
import java.awt.HeadlessException;
import java.sql.Connection;
import java.sql.ResultSet;
import java.sql.SQLException;
import java.sql.Statement;
import javax.swing.JOptionPane;
import javax.swing.UIManager;
 pada button login isikan script:
 proseslogin();
 Lalu agar saat di max jendela form berada di tengah issikan script :
      java.awt.EventQueue.invokeLater(new Runnable() {
         public void run() {
           new Login().setVisible(true);
         }
      });
    }
 ketik codingan untuk menjalankan jframe login, seperi dibawah ini
 String user = txtusername.getText();
    char[] pass = txtpassword.getPassword();
    if (user.isEmpty()) {
         JOptionPane.showMessageDialog(this, "Username Harus Diisi");
         txtusername.requestFocus();
      \} else if (pass.length == 0){
         JOptionPane.showMessageDialog(this, "Password Harus Diisi");
         txtpassword.requestFocus();
         String password = new String(pass);
         btnlogin.setEnabled(false);
         try {
           Connection conn = koneksi.sambungDB();
           Statement st = conn.createStatement();
           String n = "SELECT * FROM tb_admin "
                +"WHERE admin_username=""+user+"" "
                +"AND admin_password=MD5("+password+"')";
```

```
//
          System.out.println(q);
         ResultSet rs = st.executeQuery(n);
         if (rs.next()) {
            Data_perumahan h = new Data_perumahan();
            h.setExtendedState(Frame.MAXIMIZED_BOTH);
            this.setVisible(false);
            h.setVisible(true);
         }else{
           JOptionPane.showMessageDialog(this, "Username dan Password
Salah");
            txtusername.requestFocus();
           btnlogin.setEnabled(true);
         } catch (HeadlessException | SQLException e) {
           JOptionPane.showMessageDialog(this, e.getMessage());
       }
```

5. Membuat jframe data_perumahan seperti dibawah ini :

```
Pertama kita import seperti codingan dibawah
import java.awt.HeadlessException;
import java.io.ByteArrayOutputStream;
import java.sql.Connection;
import java.sql.ResultSet;
import java.sql.SQLException;
import java.sql.Statement;
import javax.swing.JOptionPane;
import javax.swing.table.DefaultTableModel;
import java.io.File;
import java.io.FileInputStream;
import javax.swing.ImageIcon;
import javax.swing.JFileChooser
Lalu ketikan codingan seperti dibawah ini
public class Data_perumahan extends javax.swing.JFrame {
  int idBaris=0;
  String role;
  DefaultTableModel model;
  public Data_perumahan() {
    initComponents();
    //koneksi.sambungDB();
    aturModelTabel();
    TipePerumahan();
    showForm(false);
    showData(" ");
  }
  private void aturModelTabel(){
    Object[] kolom = {"No","Nama Perumahan","Alamat","No
telepon","Email","Pengembang","Tipe perumahan"};
    model = new DefaultTableModel(kolom,0) {
    boolean[] canEdit = new boolean [] {
    false, false, false, false, false, false
     };
     @Override
    public boolean isCellEditable(int rowIndex, int columnIndex) {
```

```
return canEdit [columnIndex];
  }
};
tabelperum.setModel(model);
tabelperum.setRowHeight(20);
tabelperum.getColumnModel().getColumn(0).setMinWidth(0);
tabelperum.getColumnModel().getColumn(0).setMaxWidth(0);
private void showForm(boolean b){
  areaSplit.setDividerLocation(0.3);
  areaSplit.getLeftComponent().setVisible(b);
private void resetForm(){
  tabelperum.clearSelection();
  namaperum.setText("");
  alamat.setText("");
  notelepon.setText("");
  email.setText("");
  pengembang.setText("");
  tipePerum.setSelectedIndex(0);
  namaperum.requestFocus();
}
private void TipePerumahan(){
  tipePerum.removeAllItems();
  tipePerum.addItem("Pilih Tipe Perumahan");
  tipePerum.addItem("Tipe 21");
  tipePerum.addItem("Tipe 36");
  tipePerum.addItem("Tipe 45");
  tipePerum.addItem("Tipe 54");
  tipePerum.addItem("Tipe 60");
  tipePerum.addItem("Tipe 70");
  tipePerum.addItem("Tipe 120");
private void showData(String key){
  model.getDataVector().removeAllElements();
  String where = "";
  if (!key.isEmpty()) {
    where += "WHERE nama_perumahan LIKE '%" + key + "%' "
         + "OR alamat LIKE '%" + key + "%' "
         + "OR no_telepon LIKE '%" + key + "%' "
```

```
+ "OR email LIKE '%" + key + "%' "
            + "OR pengembang LIKE '%" + key + "%"
            + "OR tipe_perumahan LIKE '%" + key + "%'";
     String sql = "SELECT * FROM data_rumah " + where;
     Connection con;
     Statement st:
     ResultSet rs;
     int baris = 0;
     try {
       con = koneksi.sambungDB();
       st = con.createStatement();
       rs = st.executeQuery(sql);
       while (rs.next()) {
         Object id = rs.getInt(1);
          Object nama_perumahan = rs.getString(2);
          Object alamat = rs.getString(3);
          Object no_telepon = rs.getString(4);
         Object email = rs.getString(5);
          Object pengembang = rs.getString(6);
         Object tipe_perumahan = rs.getString(7);
         Object[] data = {id, nama_perumahan, alamat, no_telepon, email,
pengembang, tipe_perumahan };
         model.insertRow(baris, data);
         baris++;
       }
       st.close();
       con.close();
       tabelperum.revalidate();
       tabelperum.repaint();
     } catch (SQLException e) {
       System.err.println("showData(): " + e.getMessage());
     }
  }
  private void resetView(){
     resetForm();
     showForm(false);
     showData("");
     hapus.setEnabled(false);
```

```
idBaris = 0;
}
private void pilihData(String n){
  hapus.setEnabled(true);
  String sql = "SELECT * FROM data_rumah WHERE id="" + n + """;
  Connection con:
  Statement st:
  ResultSet rs;
  try {
    con = koneksi.sambungDB();
    st = con.createStatement();
    rs = st.executeQuery(sql);
    while (rs.next()) {
       int id = rs.getInt(1);
       String nama_perumahan = rs.getString(2);
       String Alamat = rs.getString(3);
       String no_telepon = rs.getString(4);

       || tipe_perumahan == 0) {
       JOptionPane.showMessageDialog(this, "Mohon lengkapi data!");
     } else {
       String tipe_perum_isi = tipePerum.getSelectedItem().toString();
       String sql = "UPDATE data_rumah "
            + "SET nama_perumahan=\"" + nama_perumahan + "\","
            + "alamat=\"" + Alamat + "\","
            + "no_telepon=\"" + no_telepon + "\","
            + "email=\"" + Email + "\","
            + "pengembang=\"" + Pengembang + "\","
            + "tipe_perumahan=\"" + tipe_perum_isi + "\","
            + "\" WHERE id=\"" + idBaris + "\"";
       Connection con;
       Statement st;
       try {
         con = koneksi.sambungDB();
         st = con.createStatement();
         st.executeUpdate(sql);
         st.close();
         con.close();
         resetView();
         JOptionPane.showMessageDialog(this, "Data telah diubah!");
       } catch (SQLException e) {
         JOptionPane.showMessageDialog(this, e.getMessage());
  }
  private void hapusData(int baris){
    Connection con;
    Statement st;
    try {
       con = koneksi.sambungDB();
       st = con.createStatement();
       st.executeUpdate("DELETE FROM data_rumah WHERE id=" + baris);
       st.close();
       con.close();
```

```
resetView();
       JOptionPane.showMessageDialog(this, "Data telah dihapus");
     } catch (SQLException e) {
       JOptionPane.showMessageDialog(this, e.getMessage());
     }
  }
Pada Button Tambah Data ketik codingan seperti dibawah
role = "Tambah";
    simpan.setText("Simpan");
    idBaris = 0;
    resetForm();
    showForm(true);
    hapus.setEnabled(false);
Pada Button hapus
    if (idBaris == 0) {
       JOptionPane.showMessageDialog(this, "Pilih data yang akan"
       + "dihapus");
     }else{
       hapusData(idBaris);
     }
Pada Button Simpan
    if (role.equals("Tambah")) {
       simpanData();
     }else if (role.equals("Ubah")) {
       ubahData();
     }
Pada button Logout
  private void logoutActionPerformed(java.awt.event.ActionEvent evt) {
    resetForm();
```

```
showForm(false);
      hapus.setEnabled(false);
      idBaris = 0;
 Pada formComponentResized
  areaSplit.setDividerLocation(0.3);
 Pada tabelperumMouseClicked
      role = "Ubah";
      int row = tabelperum.getRowCount();
      if (row > 0) {
         int sel = tabelperum.getSelectedRow();
         if (sel !=-1) {
           pilihData(tabelperum.getValueAt(sel, 0).toString());
           simpan.setText("UBAH DATA");
         }
      }
Pada txtcariKeyReleased
 String key = txtcari.getText();
  showData(key);
 Pada button upload
      JFileChooser chooser = new JFileChooser();
      chooser.showOpenDialog(null);
      File f = chooser.getSelectedFile();
       unggahfoto.setIcon(new ImageIcon(f.toString()));
       String filename = f.getAbsolutePath();
       brosur.setText(filename);
       try {
         File image = new File(filename);
         FileInputStream fis = new FileInputStream(image);
         ByteArrayOutputStream bos = new ByteArrayOutputStream();
         byte[] buf = new byte[1024];
         for (int readNum; (readNum=fis.read(buf))!=-1;) {
```

```
bos.write(buf, 0, readNum);

}
byte[] photo = bos.toByteArray();
} catch (Exception e) {
    JOptionPane.showMessageDialog(null, e);
}
```

6. FINISH.. MARI KITA RUN

- Kalau klik login otomatis ke bagian di bawah ini

- Ini contoh gambar button Tambah data dan uplod file

- Klik button simpan

Tara Data Dan File Brosure

- Kita coba Button hapus

- Selanjutnya kita coba button cari
